Why Conestoga?

Camping's #1 Rental Cabin Supplier:

For over 40 years Conestoga Log Cabins has served the needs of the US campground and resort industries. As the largest American supplier to these industries, we have earned the trust and respect of campground owners and resort property managers nationwide as well as overseas.

Conestoga built a reputation for designing and manufacturing attractive, economical, long-lasting rental cabins. Conestoga is the #1 supplier of commercial log cabins with thousands sold to campgrounds, resorts, and other commercial lodging properties.

A successful rental program requires log cabins that are not only beautiful and rugged but affordable and low-maintenance. Trust Conestoga to deliver log cabins that will contribute toward a healthy rental ROI year after year.

Call us to review cabin plans and see how we help campgrounds and resorts succeed. We are happy to provide references.

The Conestoga Difference

Real People and a Resourceful Website:

When Conestoga first started, we began producing log cabins as a small family business. Since then we've experienced tremendous growth but we have stayed true to our family roots. Conestoga Log Cabins is still run like a family business. Local people answer the phones, run the machinery and ship your log cabin kits. Our commitment to tradition and the people in our Conestoga family doesn't mean we don't embrace technology though. One look at our website (ConestogaLogCabins.com) will show you that we take full advantage of all the web offers. We have rich media content with multiple video streams, interactive cabin design capability, plenty of PDF downloads and enough pictures to keep our web host's servers very busy. Work with us and you'll see: through our people and our virtual presence, we really connect with the log cabin community.

Literally, Ready-To-Assemble:

Every log cabin kit we produce is built to exact specifications and precision-milled in our 100,000 sq. ft. Pennsylvania production facility. Every log cabin kit arrives at your building site ready-to-assemble. Our cabin kit comes with logs cut to exact size, precisely notched and individually coded and labeled. As the leading US producer of log cabin kits, Conestoga employs an array of CAD/CAM technology to ensure that every cabin kit can be assembled with ease. Not only are our kits easy to assemble, Conestoga's log cabins are also the most inclusive standard kits available. See the complete material listing in this catalog.

Conestoga Support

Conestoga Project Consultants - Trusted Advisors: We pair every new customer with an individual Conestoga project consultant who has only one job: to serve as a trusted advisor. Conestoga project consultants will help every step of the way to see your project through the idea stage, through design and finally see the walls going up. Our project consultants will meet your budget and work to make your project a reality.

Conestoga Technical Support: Because we design and manufacture every log cabin kit we ship, Conestoga has developed a comprehensive knowledge base of technical expertise. Not only do our technical support staff work closely with design, engineering, and production, they also interact with assembly teams, builders, project consultants, and the end users of our product. This comprehensive knowledge of our product line makes them world-class support specialists. Conestoga's technical support specialists are available to ensure a trouble-free and satisfying experience with your Conestoga kit. Our staff of support specialists is field-trained, service oriented and committed to perpetuating our reputation for outstanding customer support. Call them and see for yourself!

Conestoga Expertise

Conestoga's Custom Design Services:

While we offer an extensive line of standard models across a wide range of log building types, there may be unique requirements to a site or special features needed in a log building which demand a custom design. Conestoga Log Cabins offers an in-house custom design service to accommodate such needs. Our designers are experts in log cabin structures and bring years of experience in design, engineering and use of CAD (computer aided design). Conestoga's design department has advanced the use of BIM (building information modeling) for log cabin production and works closely with software developers to ensure that Conestoga stays on the leading edge of CAD technologies. Whether you need a simple adjustment to a floor plan, a reconfiguration of an existing building plan or conceptual sketches for a totally new design, Conestoga's custom design service is able and available.

Conestoga Cabin Assembly Service:

While many Conestoga log cabin kit buyers handle their own assembly, others chose to contract with a local builder. Choosing to build a Conestoga log cabin also provides you with the option to contract with us for assembly of your log cabin kits. Conestoga employs a network of professional assembly teams each of which is trained, experienced and endorsed by Conestoga Log Cabins. Our assembly teams arrive on site and complete the entire kit assembly process, built right and built to last. If your preference is to have someone assemble your cabin kits for you, there is no better team available than a Conestoga assembly team. Conestoga assemblers have successfully completed many campground and resort property log cabin kit installations. Campground and resort references are available upon request. Certain terms and conditions apply to cabin kit assembly services. Contact Conestoga to request Assembly Terms and Conditions or to speak with a project consultant.

Better Materials, Better Cabins

Conestoga's Everlast™ Log:

Every Conestoga log cabin is built using Conestoga's exclusive Everlast™ Log - the DNA of every Conestoga log structure. The Everlast™ Log is a laminated powerhouse of structural strength, stability and durability. Each log is kiln dried to an amazing 15% or less moisture content. Because of the physical properties of the log's construction, the Everlast™ Log resists warping, twisting, and settling which means every log delivers consistency in performance and structural stability. Each Everlast™ Log is precision-notched for exact fit and the extraordinary interlocked corners add structural integrity and weather-tight performance to all Conestoga buildings. Using our return wall system, we can create wall sections up to 26' long with notches from our milled 28' logs. Using longer logs, and securing the structure with the return walls, ensures superior water resistance. Finally, the lumber species used in our Everlast™ Logs is renowned for excellent working properties including cutting, nailing, sanding, staining, and finishing.

We've Always Been Green:

Often people interested in log cabins are also drawn to environmental wellness. Likewise, Conestoga is committed to environmental wellness and we demonstrate this commitment in our manufacturing methods. It begins with Conestoga's Everlast™ Log which is produced in concert with an Environmental Management System certified ISO-14001 assuring minimal environmental impact in timber harvesting. Our milling operations utilize cutting-edge fiber optimization software which nearly eliminates any material waste.

Images of products are for illustrative purposes only.

We Can Meet Any Energy Code

Our log cabins and homes have never failed to meet an energy code requirement. Logs benefit from thermal mass to capture and retain heat better than traditional homes. We have an advantage over other log cabin and home companies because our Everlast™ Log is engineered to allow for longer lengths, fewer twists, checks and considerably less gapping than traditional log structures. The result is less air infiltration and maintenance that provides a more comfortable energy efficient cabin that saves you money while enjoying your log cabin.

What is Thermal Mass? Thermal Mass is a concept in building design and construction that describes how the walls of the building provide “inertia” against temperature fluctuations. By their very nature log cabins and log homes differ from other construction techniques, because solid wood has both moderate R-value (insulation) and significant thermal mass.

Solid Wall

The single wall is perfectly suited for cabins that are located in moderate climates and/or are used seasonally.

Solid Wall Siding Package

This is recommended for year round residences in cold weather climates. This package adds a layer of insulation and interior log siding to a single wall structure. This technology will meet or exceed the most stringent energy code requirements and lower utility bills, while maintaining the same log look inside your cabin.

Conestoga's Everlast™ Log

Offers a low maintenance solution

- The Everlast™ Log is resistant to warping, twisting and settling because it is engineered to be structurally stable.
- The Everlast™ Log is resistant to movement, shrinkage, and checking, because it is kiln-dried to 15% or below moisture content.
- The Everlast™ Log is resistant to decay, because it is kiln-dried below the 19% fungi threshold.
- The Everlast™ Log is notched, cut to length, drilled, and mortised for all electric and fasteners.
- The Everlast™ Log can be up to 28' long, which eliminates unsightly log joints, reduces the possibility of air and water infiltration and improves overall energy efficiency.
- The Everlast™ log is 50% stronger than traditional logs.

The Stronger and More Stable Engineered Log

D-Log

This cross-section of glued surfaces is what gives the Everlast log its superior strength.

The two to three interior pieces are laminated together with a continuous height outside piece on each side.

D-Log has a round face on the exterior and a flat face on the interior.

Continuous height outside pieces.

H-Log

Everlast™ Log Advantages

- The Everlast log's wood is harvested using sustainable forestry techniques.
- It is lighter, making it easier to handle during installation.
- It possesses very tight growth rings and offers preferred stability characteristics when exposed to moisture fluctuations.
- It can be stained with consistent and excellent results.
- It is very workable when cutting and drilling.
- It has excellent nailing characteristics.

Flat Log has a flat face on the exterior and interior faces.

Conestoga Log Cabin Resort Owners

"We have had a wonderful experience and great public use of the camper cabins at Carolina Beach State Park and believe some of our fellow state park managers would be interested in Conestoga Cabins."

Carolina Beach State Park, NC

"My family's summer camp for children dates back to the early 1930's. When it came time to renovate and build our future we turned to Conestoga Log Cabins and we couldn't be happier! I could go on and on about the quality of the materials, detailed thinking that goes into each building and the superior customer service. You don't need to look anywhere else for log cabin kits. These cabins are everything you could dream of. Conestoga's log cabin kits are the gold standard in the industry. We did our homework and checked out several manufacturers. Whether it's a hot, hot summer day or a cool fall evening, the cabins are tight and very comfortable. Their log cabin kits are built to last. Quality at every step of the relationship with Conestoga. Highly recommend."

Product Details

Windows

Conestoga uses high quality casement and double hung windows. As a standard all our windows are Low-E/Argon and utilize Warm-Edge Technology to enhance energy performance.

Flooring

Conestoga uses only high-quality, cabin grade flooring.

Upgrades available to any type of finished flooring.

Metal Roof (Shingles Optional)

29 GAUGE FULL HARD STEEL

ZINC PHOSPHATE PRE-TREATMENT
ZINC COATING

- Seamless Roofing System
- Sustainable and longer lasting than a traditional roof, with a life expectancy of 45 years
- Will never decompose and when it is time to be replaced, steel is recyclable and reusable
- Shingles roof optional

45-Year Paint Warranty

Engineering Services

Conestoga Log Cabins & Homes offers log cabin kits that are fully engineered, pre-cut and ready-to-assemble. Our standard log cabin kits range from cozy 11 x 13 camping cabins to spacious 3,000+ SQF grand multi-purpose buildings, bathhouses, and bunkhouses.

Our line of log cabin kits are designed to appeal to a wide range of needs. Moreover, we offer custom design services and will engineer and produce a log cabin kit to meet your specific needs.

Want to see what your custom designed building will look like? We can do one better, you can walk through it with our new "fly through" 3D videos. We can even furnish it just how you would like to see it! Or look at it from an aerial view and see just how much space your new log building has to offer.

Assembly

We make it easy for home owners or builders without log home construction experience to build our log cabins. Every log has a label attached with a unique number that corresponds to plan drawings. This unique number enables you to know the exact location of every log during the construction process.

The numbering system not only ensures organization and easy identification, but facilitates technical support if needed. If a question arises during construction our technical support team is available to provide assistance. By providing the log number our technicians will know exactly what you're working on and how to better assist you.

In addition to our user friendly log numbering system, detailed assembly instructions, plans and diagrams accompany every Conestoga log home kit. Technical support phone and email is included with every purchase. In addition, an assembly crew can be made available to travel worldwide. Check us out on YouTube for more construction tips.

Need help with your log home assembly kit?

In case a question arises, Conestoga's knowledgeable staff is available for assistance. Conestoga is committed to providing customers with quality support, materials and supplies.

Service

Whether you're an individual or an organization, Conestoga has experienced construction teams available to assemble our structures within the United States and abroad.

With a Conestoga team you can be assured you have the skill and expertise of trained craftsmen. Conestoga's teams provide a knowledge level that ensures an efficient and quality installation at a competitive price.

For most individuals and organizations, time seems to be in demand. Gaining more of this resource is a logical reason for hiring a Conestoga team. Experience peace of mind in knowing your newest investment has been installed with the highest level of workmanship provided by a Conestoga construction team.

- Competitive Pricing
- Efficient
- Trained Personnel Ensure Quality
- Satisfaction Guaranteed

Do your logs come from renewable forest practices?

Yes, all our logs come from Forest Stewardship Council (FSC) certified vendors. The engineered logs originate from trees from planted forests and have a much smaller carbon footprint than other log systems.

How long does it take to assemble?

The size of the building and the number of people assembling has a significant impact. Cabins under 800 SQF with a crew of three people should take about three weeks to assemble a basic cabin. Additional time should be added for foundation, running utilities, obtaining construction permits and staining. With larger log homes, with full insulation and finishing, the time would be a few months. We have a crew that can assemble the kit worldwide and would work with your local general contractor. We also have in-house technical support for those that self-build. Here is a link to assembly videos: <http://conestogalogcabins.com/category/assembly-videos/>.

How often is it recommended to re-caulk between the logs?

Because of our engineered logs, there is no need to caulk between the logs. Caulk is used where the logs cross, such as the corners of the cabin. It is recommended to re-stain every five years, which is when the caulk should be inspected and re-caulked as needed.

What are the different grades of insulation used?

We use both fiberglass and Polyiso board. The fiberglass can be R-19 to R-38 and is typically used in floors and ceilings. If wall insulation is needed, one or two layers of Polyiso board is installed. We have log homes in Alaska and many other cold climates and can always meet the local energy code requirements.

Is there a choice of roofs and if so, what are the different types?

We use both shingles and metal in all colors. Our metal roof has a 45 year warranty and shingles have 25-35 year warranty.

What type of foundation is recommended?

Our log buildings have been built on many different types of foundations. Typical foundations are slabs, crawl spaces, piers or full basements.

What is the warranty on the material used?

The entire cabin has a one year warranty. Specific materials have longer warranties, such as the roof for 25-45 years and windows for 20 years. The logs are warranted against splitting for life.

Is there a warranty on the assembly and construction?

A typical construction warranty of one year on the entire cabin is provided. Technical support is also provided free of charge.

Is there a strong sound barrier from the exterior?

Wood naturally absorbs sound, which is why it is used along highways for sound barrier walls. All log cabins provide significantly better sound protection than traditional building systems. Because of less movement and the tight seal of our Everlast™ logs, our cabins are an excellent sound barrier.

Does extreme humidity or cold affect the logs and the caulking?

We have cabins in tropical climates and the cold region of Alaska as well as in all 50 states and 7 foreign markets. Wood grows naturally in all climates. The specific species of wood we use has proven to withstand all climates. We can also meet any snow load or wind load building requirements. One of our customers told us, "The town and neighboring communities where our cabin is located was declared a national disaster area from Hurricane Irene. Our cabin suffered NO damage and is a solid Conestoga log cabin."
